

AATHIKA ILMUDEEN

Software Engineering Undergraduate

PROFILE

Software Engineering undergraduate at SLIIT, Year 3 Semester 1, with hands-on experience in full-stack web and mobile development. Skilled in data structures, algorithms, OOP, and the MERN stack, with a strong passion for learning and contributing to projects that drive technological innovation.

TECHNICAL SKILLS

- **Programming Languages:** Java, C, PHP, Python, JavaScript
- **Frameworks & Libraries:** Spring Boot, React.js, Node.js, Express.js
- **Web Technologies:** HTML5, CSS3, Tailwind CSS, JSP
- **Databases:** MySQL, MongoDB, SQL Server
- **Core Concepts:** Object-Oriented Programming (OOP), Data Structures & Algorithms, MVC Architecture, REST APIs, Agile
- **Testing & Debugging:** Application debugging, troubleshooting, API testing (Postman), Selenium, Playwright
- **Dev Tools:** GitHub, IntelliJ IDEA, Eclipse, VS Code, Postman, Trello, Figma
- **Cloud & Others:** AWS (basic), Workflow Automation
- **AI Tools:** ChatGPT, GitHub Copilot, Claude

EDUCATION

BSc (Hons) in Information Technology Specialized in Software Engineering

2023 - 2027

Sri Lanka Institute of Information Technology - SLIIT | **CGPA - 3.65**

- **Dean's List - year 2 Semester 2 (GPA - 3.82)**
- **Dean's List - year 1 Semester 2 (GPA - 3.74)**
- **Dean's List - year 1 semester 1 (GPA 3.77)**

GCE Advanced Level Examinations

2022

President's Science College - Puttalam

- Biological Science | Biology - C, Chemistry - C, Physics - S

GCE Ordinary Level Examinations

2018

Erukalampidy Muslim Maha Vidyalaya - Puttalam

- 8 A's B

PROJECTS

Bridge i - Internship Job portal

[GitHub](#) [Live](#)

Node.js, React.js, MongoDB Atlas, Express.js, Tailwind CSS, JWT authentication, Puppeteer, Socket.io

APIs: Gemini, Vapi AI voice, OCRSpace, GoogleMap Geocoding API

- A full-stack Internship Portal & Learning application for Sri Lanka Rural Areas students using the MERN stack with role-based authentication (JWT) supporting students, Company, and Admin roles with secure access control.
- Performed unit, integration, and performance testing using JUnit to ensure system reliability and scalability.
- Built advanced PDF reporting system using Handlebars/Puppeteer with filterable exports for user profiles, internship summaries, and application analytics supporting search by status, type, and role ranges.
- Architected RESTful API following MVC pattern with MongoDB aggregation pipelines for analytics, centralized error handling, and complex Mongoose schemas with validation rules.
- Real-time messaging system using Socket.IO with WebSocket connections, enabling instant communication between employees, HR officers, and Students with typing indicators, read description, and online Application tracking

Smart AI Healthcare Microservices Platform

[GitHub](#)

Node.js, Express, React, MongoDB Atlas, Docker, Kubernetes, JWT, Jitsi, Stripe, Nodemailer

- Built a full-stack telemedicine platform using Node.js microservices with six independent services behind a centralized API gateway.
- Implemented JWT authentication with role-based access control for Patient, Doctor, and Admin roles with protected routes across all services.
- Integrated Jitsi video consultation with auto-generated meeting links on appointment acceptance for in-browser doctor-patient sessions.
- Automated email notifications on booking confirmations, status changes, and prescriptions using Nodemailer with SMTP fallback.
- Built Stripe Checkout and mock payment flows restricted to accepted or completed appointments only.
- Deployed using Docker Compose and Kubernetes with environment-based configuration across all services and a React frontend.

Rural Craft Marketplace

[GitHub](#)

Node.js, React.js, MongoDB Atlas, Express.js, Tailwind CSS, JWT authentication, Puppeteer

- A full-stack e-commerce web application for Sri Lanka Traditional Products using the MERN stack with role-based authentication (JWT) supporting Vendors, Foreign Investors, and Admin roles with secure access control.
- Built product browsing with advanced filtering and search features.
- Built advanced PDF reporting system using Handlebars/Puppeteer with filterable exports for user profiles, policy summaries, and claims analytics supporting search by status, type, and date ranges.
- Architected RESTful API following MVC pattern with MongoDB aggregation pipelines for analytics, centralized error handling, and complex Mongoose schemas with validation rules.
- Worked as a leader for the complete software development lifecycle and performed investigations and fixed bugs.

TaskMate - Task Management System

[GitHub](#)

Technologies used: Java, Spring Boot, Angular 17, MySQL, JWT Authentication, Spring Security, Bootstrap 5

APIs: Spring Security Filter Chain, Spring Data JPA

- Built a full-stack Task Management application using Spring Boot REST API and Angular 17 standalone architecture with JWT-based authentication and role-protected API routes using Spring Security filter chain.
- Implemented JWT authentication flow end-to-end — user registration and login with token generation, local storage, and an Angular functional HTTP interceptor attaching Bearer tokens to all outbound API requests.
- Designed layered MVC architecture with Controllers, Services, Repositories, and centralized exception handling.
- Built responsive UI with reactive forms, route guards, task filtering, dashboard stats, and Bootstrap modals.

Resume Screening AI System - AI/ML

[GitHub](#)

Python | Flask | REST API | Google Gemini | Prompt Engineering | HTML/CSS | JavaScript

- Built a full-stack AI-powered resume screening web application using Python Flask and Google Gemini API to evaluate candidate resumes against job descriptions with automated scoring across skills, experience, and education.
- Designed and implemented a structured prompt engineering system to enforce JSON-formatted AI responses, ensuring reliable output parsing using regex-based sanitization and schema validation.
- Developed a RESTful /analyze API endpoint following MVC architecture principles with robust input validation, centralized error handling, and structured JSON responses for frontend integration.
- Implemented an AI-driven scoring and classification engine that categorizes candidates into Shortlist, Maybe, or Reject based on weighted evaluation of multiple criteria.
- Created a dynamic frontend interface using HTML, CSS, and JavaScript with interactive score visualization, animated progress bars, and tag-based display for matched and missing skills.

Event Booking & Management System - JezzaEvents

[GitHub](#)

Technologies used: Java | JSP/Servlets | MySQL | JDBC | Apache Tomcat | Bootstrap

- A full-stack web application designed to streamline event planning and seat reservations using Java EE (MVC architecture), allowing users to explore and book diverse events with category-based filtering.
- Implemented secure session management and role-based access control (User, Organizer, Admin) to manage event lifecycles, bookings, and user permissions efficiently.
- Structured the application using a clean three-tier architecture: DAO layer for database persistence, Service layer for business logic, and Servlets for handling HTTP requests.
- Utilized core OOP principles such as inheritance and encapsulation to model various event types and user roles, ensuring a scalable and maintainable codebase.

Android Wellness & Habit Tracker (Ritmo)

[GitHub](#)

Technologies: Kotlin | Android Jetpack | Material Design 3 | MPAndroidChart

A native Android application built with Kotlin to help users track daily habits, monitor moods, and manage hydration goals through a clean, modern interface.

- Engineered a single-activity architecture using Jetpack Navigation and built a responsive UI with Material Design 3 components and RecyclerViews.
- Implemented background notifications using AlarmManager and a BroadcastReceiver, and integrated MPAndroidChart for dynamic data visualization of user progress.
- Developed a home screen App Widget for at-a-glance habit tracking and managed local data persistence for a seamless offline experience.

FREELANCE EXPERIENCE

Worked on multiple freelance projects including eCommerce platforms (LuxuryX, InSrilanka) and Finance Tracker applications, collaborating with senior software engineers to develop and maintain scalable web solutions.

SOFT SKILLS

- Strong communication skills (inter-team & stakeholder communication)
- Teamwork and collaboration in Agile/Scrum teams
- Attention to detail and quality-focused mindset
- Problem-solving and analytical thinking
- Time management and adaptability
- Fast learner and self-motivated

CERTIFICATIONS

- Higher National Diploma (HND) in Information Technology
- Agile Project Management Practitioner

LANGUAGES

English | Sinhala | Tamil
